# **Travello- Tours and Travel System**

## **ABSTRACT**

Tours and Travel System is a project which provides a platform for several tour companies who doesn't have their own websites to give publicity to their packages. This system helps them by adding their packages in our website and enabling the users/customers to book their package. The system allows the user to check various tour packages and choose the package accordingly and apply for the needed package. When the user chooses the type of package option, the system also allows the user to book the package of the destination for the desire date. Thus, this software system automates the working of a travel agency and allows users to check and book their holidays online through this website.

## **USERS**

- Admin
- Customer
